Remanufactured Components

Lift trucks are very pricey pieces of equipment. A five thousand pound new electric unit could cost between eighteen thousand to twenty five thousand and a few thousands of dollars more will be invested for a battery and a battery charger. The same internal combustion lift truck of the same lift capacity would cost slightly less and the diesel models which are capable of heavier lifting capacities can cost upwards of $100,000. Reconditioned forklifts are a choice in order to save much cash in view of the fact that they cost less than half the price of brand new units.

Several purchasers may be skeptical about acquiring a used or reconditioned lift truck since they feel they would have to spend more on upkeep. Then again, a properly reconditioned lift truck would be able to perform just as well as a new one. Even if your lift will get heavy use, as long as you take good care of the machine, it will serve your needs and likely save you a lot of money.

It is essential to determine what the seller means by a reconditioned or refurbished lift truck when thinking about acquiring a used forklift. Numerous companies do a very good job reconditioning a model before selling it. This includes disassembling the forklift, rebuilding the engine, sandblasting the lift and after that reassembling everything and finishing with a fresh coat of paint.

To correctly and meticulously reconstruct a forklift engine, a good company would absolutely disassemble it. A heat cleaning system could then be used to clean all the parts. Once this step has been completed, all of the parts are checked to see if they have any defects, any breakage or any extensive wear. Specific components like for instance cylinder blocks, connecting blocks, cylinder heads and crankshafts are resurfaced, resized and reground if considered necessary. Several parts like for instance bolts, gears, nuts and so on. are repaired or replaced as needed.

The engine is rebuilt manually when the overhaul has been completed. After putting it back together, a series of tests are applied to the running equipment. This is done to check all of the components to guarantee there are no issues or leaks. If any problems occur, the needed modifications are done.

There is no reason to be concerned about buying reconditioned lift trucks from quality sellers. The process the machines go through to be rebuilt ensures the utmost dependability. Upkeep expenses could truly work out to be less in view of the fact that you would avoid the initial phase of higher repairs projections that a brand new forklift has as it is broken in. By following routine upkeep schedules and taking care of the machinery correctly, a reconditioned lift truck will serve you well.
