

Barrel Clamps

Referred to as "Barrel Clamp", this hydraulic attachment is used on forklifts in order to clutch items that you would like to transport utilizing the forklift. Usually, they are utilized so as to paper rolls, barrels, and handle kegs, along with some barrel clamp designs having the ability to rotate the cargo. For instance, the revolving function enables the individual operating the forklift to be able to put in a vertically stored paper into the horizontal intake of a printing press.
